

# Drum Rack – 1 Drum

The Drum Rack – 1 Drum provides a safe, compliant way to store 205L drums in workshops, warehouses, manufacturing plants, and chemical handling sites. Built from durable steel with integrated spill containment, it prevents leaks, protects staff and the environment, and keeps worksites compliant. A raised base allows easy forklift access, and flatpack delivery ensures quick on-site assembly.

- Designed to securely store standard 205L drums
- Includes a drain plug for easy emptying of captured liquids
- Built to meet Australian portable-unit requirements, offering a spill capacity of at least 125% of the drum volume
- Raised base design allows convenient lifting with a forklift or pallet jack
- Constructed from steel for a durable, non-flammable storage solution
- Supplied flatpack with both rack and spill bin, with simple bolt-together assembly on site
- Material: Steel
- Finish: Zinc

| Code  | Working Load Limit (kg) | Spill Capacity (L) | Ground to Base Height (mm) | Overall Dimensions LxWxH (mm) | Unit Weight (kg) |
|-------|-------------------------|--------------------|----------------------------|-------------------------------|------------------|
| V7592 | 300                     | 250                | 90                         | 1204x604x754                  | 82               |
